

operto

Congratulations! Your property manager is implementing the Operto property automation system. Leveraging intelligent software and best-in-class hardware, Operto will increase the performance of your rental and help you sleep soundly knowing your property is protected.

These are the benefits your home will receive from adopting this technology:

Increase Security

Unique codes are generated for each reservation and expire at check-out time. No risk of copied keys or unauthorized re-entry.

Detailed access logs tell you exactly who accessed your property and when – including guests, cleaners, and service staff.

Reduce Costs

Save money on your energy bills. Operto can manage your thermostats and turn off the heat and air conditioning when your guest leaves. Typical results average 20% utility savings.

Considered a “semi-monitored security system” by home insurers, Operto can lead to lower premiums. Check with your provider.

Boost your Bookings

Operto works 24/7, enabling last-minute and late-night bookings without any obligation to greet the guest in person.

Operto alerts your property manager when the cleaner finishes early, allowing them to move up the reservation and get more five-star reviews or charge for the convenience of early check-in.

Protect your Property

Operto monitors noise and alerts your property manager when a party is raging – before the neighbour complains.

See real-time occupancy and prevent the entire football team from crashing on the floor for a two-person reservation.

*Different plans are available. Check with your property manager to confirm which services will be implemented.

Operto protects your home
with best-in-class locks
